Mines and Prospects--Furnaces and Mills

Silver and Lead in the Old Dalton

Metallic Value of the Ores Reminiscent of Sensational Days in That Bingham Producer.

From the recent disclosure in the Pingham Con.'s Dalton ground at Educham is now coming to the leadblast furnaces of the American Smelting and Refining company, a class of ore that repeats, in minutest particular the story of former days in the operation of that territory. For some time, it was yesterday learned, the management has been reporting at the neigh-bor's furnaces with ores from the leadbearing channel which shows an average of 40 per cent in that metal with 20 ounces silver and \$1.60 gold per ton. this quality of ore occurring in a channel not distant from that in which the ferro-sulphide, containing copper, gold and silver, prevalls. In following this up, however, the quality has partaken of the sensational and last night a consignment was sent out of camp in consignment was sent out of camp in which some of the ores show as much as 225 ounces silver, with 62 per cent lead, some sold and copper. That the lot will show over 100 ounces silver and 45 to 50 per cent lead the mine management has no doubt. To just what extent this ore prevails has not been determined, but lead-silver bearing rock has now become in this portion of the company's property a distinct source of revenue. The zich ora has been un-covered on the lowest level in territory ore from this channel is adding but a little to the company's earnings the average value of the rock comparing not unfavorably with the rule on the local market.

Capt MacVichie is now at camp and

on his return full particulars of the new development will probably be released.

LINCOLN'S RICH ORE

Rock Containing Over Four Hundred Gold Dollars Sent to Smelter.

Recent receipts at the furnaces of the American smelter from new disclosures at Goldfield are not the only ones now embellishing the market with their gold-bearing contents. On the contrary there is now coming from the Lincoln mines out of Boise, Idu., a quality of ore for which the consignors are drawing down as much as \$412 gold per ton, and while it is not occuring in large volume, said Marager Hodson on his arrival from camp yester-day, there is being derived from it each month a very nice piece of money. In addition to this ore, of which no really systematic effort is made to separate it from the mass, the mill is now reducing an average of 100 tons daily to a concentrate which is delivered on this market and which shows from \$40 to \$100 gold, an average of 15 ounces silver, per ton. For over 1200 feet the management of the Lincoln has now driven on the strike of the ledge while in the main stope a width of seven square sets or nearly forty feet has been described with but one wall exposed. The ore has now been opened to a depth of 350 feet, and the permanence of the mine is quite conclusively dem-enstrated. At all events it looks as if the company was on the way to an early distribution of dividends and yet the Lincoln is but a youngster in the diggings of the State.

For the reduction of ores at the Black Pearl, said Mr. Hodson, the management has placed an order for a new mill, while over at the Checkmate con-nection has been made with its main channel in the lowest workings with a new channel rewarding their re-searches on the south.

The region throughout is giving good account of itself, said the visitor, several plants should be in operation a r hence. Mr. Hodson was met e by Capt. Stallings and with him year hence. will remain several days.

SIXTY MILLION DOLLARS.

Enermous Acquisitions of President Evans of the U. S. and Others.

Two years ago Robert D. Evans. president of the United States Mining company of Utah, invaded the Yuba gold placers of California and acquired over 3000 acres of gold-bearing terri-tory. Among his associates in the un-dertaking was Bert Holden, managing

director of the United States, and John Hays Hammond. About a year ago, says a Boston publication, orders were given for two of the largest dredges ever built for gold dredging purposes to work upon this property and these dredges have just been received and placed at work. They cost \$100,000. These dredges treat 3000 cubic yards of gravel per day, which it is es-timated will show a net profit in treatment of 26 cents per yard, or about \$260,000 per annum per dredge. Fit is proposed to place fifteen of these mamnoth dredges on the property as soon as possible after the two dredges just set to work demonstrate that they will ful-

fill the requirements.

Experts' reports indicate that there is an enormous total of \$60,000,000 to be derived from the working of these 3000 derived from the working of these soon scree in the Tuba district which are controlled by the Evans-Hammond syndicate, and that the life of the property is about twenty-five years with fifteen dredges at work taking out 45,000 cubic yards of gravei per day.

Ore and Bullion.

In the ore and bullion asket the day's settlements amounted to \$29,40, McCornick & Co. reporting them as they follow. American bullion, \$22,30, gold buillon, \$3100; gold, silver, lead and copper ores, \$34,00. 4.3.00.

In the metal market silver ruled at 55% cents an ounce, lead at \$1.3004.19 per hundred pounds, and casting copper at 11% cents a pound.

MUCKLOW AT MILFORD.

President of the Majestic Company Down at the Properties.

W. B. Mucklow, who was recently retored to the presidency of the Majestic in recognition of the splendid services rendered by him in extricating the properties of the company from a predicament that threatened their loss, and to whom, more than all others, the creditor is indebted for 60 per cent of his claims, is again at Milford, where, with Manager E. F. Freudenthal, he is making an inventory of the company's re-The result of his observations is, it is said, to be submitted to the new board of directors organized at the reboard of directors organized at the re-cent meeting in Denver, and by it the future policy of the management will be determined. That the smelter will be fired up again the present season is not likely, said a gentleman conver-sant with the company's ore bodies. On the contrary it has been decided to apply the means now on hand to a further earch for ores of better quality, while some have recommended the purchase of additional ground. All this will be inquired into.

DULL DAY ON 'CHANGE.

Traders Generally on the Parachute With Outlook Forbidding.

To refrains that were almost agonizingly flat the shopkeepers at yesterday's calls on the mining exchange dealt out 18,197 shares of stock for which \$3527.22 was paid. The traders throughout were weak. Daly West was traded in around \$12.40, while Cohumbus, that had set the pace for the sprinters the previous day, glosed on a transfer at \$1.20 after an opening at \$1.26, with Mammoth coming out to a made by the former administration which was prevented in its efforts to reach the depths at which it occurs by water. Meanwhile the second along the form this second along the second the second along the second the second the second along the second the shorted it during the recent advance, and sold down to 27% cents, while Star Con. was marked down a fraction, as was New York. Another wad of Bonanza of Goldfield was released to a bid of 5 cents, while Tetro executed an order at 28 with May Day going freely order at 3 with alay Day going the state of the prices. In the sparring Boston Con made some advances, as did Horn Silver, for which several orders were out, while \$47.50 was bid for Silver King, the day closing on the following

Salvator of Tintic Ceases Extraction

Management of Utah Tunnel Denies that Tolls Exacted by it Are Remotely Responsible.

The management of the Salvator of Tintle appeared on the market during the day with two lots of ore, the larger one showing 14.6 ounces silver, with \$8 gold per ten, the smaller 32 per cent lead, with some sliver and gold. With these consignments it is said that operations at the Salvator will be suspended the company pleading that it is unable to secure the further use of what is designated on the map as the "Utah That anything exacted by the latter, said Robert D. Grant, its man-ager yesterday, has made the further ise of the tunnel prohibitory, is without foundation. When the right to mine Salvator ores through it was requested. the company was required to pay \$500 a year. It began, said Mr. Grant, shortly after paying dividends, and that the \$500 toll required of the company has interfered with its successful operation he is not prepared to believe. This statement was made by him, in that he did not desire it to appear that the Utah company or its management was responsible for any order on the part of the Salvator to dismiss its forces, cease the extraction of ore and shut down the mine. From Tintic comes a story that the

Sloux and Utah Mining companies, owning a large amount of territory that has been productive of much ore in previous years, has been extended an opportunity to consolidate with the Beck tunnel, and in the event that was not agreeable to transfer their holdings t a figure the former was prepared to hand out. This, it is said, would place the Beck Tunnel company, at the head of which is Uncle Jesse Knight of Provo, in possession of a domain com-prehending nearly all of the east side of the zone. Mr. Grant, to whom the use it, pleading that the Sioux and Itah had no doubt of the ultimate pro-luctiveness of its territory, and that was not on the bargain counter.

AT MOUNTAIN CITY.

Calent From Utah and Colorado Now Much in Evidence.

Fred T. McGurrin, who, with local speciates, has acquired a group of five nost promising locations at Mountain ity, Nev., came in from that northern camp, in the development of which ve part, yesterday morning, much cleased with the result of his observadr. McGurrin and his associates are iropping a shaft down into a ledge that has a width of about four feet, and while assays have not been had on rock brought down by him, its appearance is quite conclusive of results. At all events arrangements have been made to sink to a depth of 100 feet. At the Greenback group, recently acquired by the Newhouse-Peery syndicate and from which ores of the value of \$2800 have been sent to market, a cross-cut is now being extended from the 138-foot level with three shifts employed. the Kuntz group, an extension of the Nelson ledge, the tunnel is forging its way along the vein, with three shifts furnishing the energy, and Mr. Merriman, formerly of Bingham, directing the work, while three shifts are sink-ing on the Mountain City group, which is under bond to Poole and Moffat

At the Resurrection, which has been productive of nearly \$400,000, a dozen miners are employed, with a new shaft headed for \$540 ores under the waterlevel, while at the Nelson work was resumed on Sunday last, its mill to go into commission again as soon as the remodeling of it has been completed. The camp is building up rapidly, said Mr. McGurrin, and certainly nature has been most liberal in endowing it.

BINGHAM IN THE EAST

List From the Big Camp Highly Es teemed by the Investor.

The various Bingham properties which Boston people are interested. Utah, United States Mining, Bingham and Boston Consolidated are all showing an output which fluctuates very little from

put which fluctuates very little from week to week, say Hayden, Stone & Co. of Boston in their last market letter. The Utah company is earning at the rate of 14 per share upon its 300,000 shares of stock, the United States company at the rate of about 82 per share upon its 465,000 shares and the Bingham company 12 per share upon its 150,000 shares. The Boston Consolidated is dependent upon the Bingham smelter for its returns, and it is shipping 250 tons of ore daily from which it is receiving net earnings of about 11000 per day, which money is largely going back into the property for development. The Bingham properties are producing cheaper than any other mines listed in Boston, but what benefits they derive from the low operating costs in comparison with the lake mines they lose by reason of the large share capital. The Bingham properties, however, are all well regarded in Boston, and with any evidence of an increasing interest in Boston coppers would probably appreciate in price.

Nearing Thunder With Wagon Road

Active Movement of Mill Machinery to Begin by the Middle of Next Month.

Grading on the main road between

the mines of Thunder Mountain and the world without is now well advanced a station within twelve miles of Roose velt has been reached, and not later than Sceptember 15 the avenue will have seen opened to traffic, with nothing to prevent an easy and uneventful run into the camp of gold, said H. Clay Brownlee upon his arrival from Nampa yesterday morning. With this assurance teams with which to move the long-delayed stamps for at least two new mills and enlargements for the Dewey are being harnessed up, and, as rapidly as facilities shall permit the material for the proposed equipment will be hurried to the various properties. At present the work is being prosecuted with a force of sixty-five men and teams under the direction of Mr. Johnesse, who was designated by the State. Of the productiveness of the camp with this equipment on the ground, said Mr. Brownlee, there is no doubt whatever. Prof. Kruse of Chicago, who has just completed an examination of the Belle of Thunder, and Sunnyside, at the solicitation of F T F. Lovejoy of Pittsburg confesses his astonishment at what was revealed to him. From a ledge 107 feet between walls, said Mr. Brownlee, het drew eighty-two samples of ore that afforded him an average of \$36 per ton in gold. At the results he was staggered On the pay roll at the Belle of Thunder and Sunnyside are 257 men, these employed on the construction of the tramway, the new shafthouse and underground, while others will be put on in a few days. Prof. Kruse, who at the request of Ed H. Dewey, extended his observations into Dewey ground, testified at the finish that blocked out there are volumes of ore with which to supply eighty stamps continuously for a dozen years, and at the camp throughout he was most agreeably sur-

prised.

Mr. Browniee having disposed of his interest in the Nampa Herald to C. W. Hill, former manager of the Baker City, Or., Herald, returns to this city to remain permanently, although he recognizes in the northern region one of great

GOLD FOR CREIGHTON.

Washington Group Has Added \$130,-000 to Gentleman's Wealth.

A correspondent of the Engineering and Mining Journal, writing from Boise Basin, Ida., its placers and the ledges overlooking it, says that since the Washington group passed into the hands of John A. Creighton, who is so largely interested in Utah properties, it has been productive of ores of the value of \$130,000. The Washington mine is one of the oldest lode properties in the district; it is nine miles north of Idaho City, on a granite hill. The group of claims covers two parallel veins, striking northeast-southwest. One of these veins carries a gold-bearing quartz which is free-milling, the other vein contains a silver-bearing ore, accom-panied by iron. The silver occurs as native, ruby and antimonial silver. The veins are from eight inches to five inches in width. Development consists of a 1200-foot level and a 560-foot shaft below this level. Both veins are opened by the level mentioned, and drifts from the shaft also tap both veins. The gold ore averaged \$20.40 per ton, as the result of extraction at the mill on the

AT THE K.-K. MILL.

Three Shifts to Be Put on Soon as Conditions Shall Permit.

Treasurer Frank Westcott, who has een passing around checks at the Kearns-Keith of Park City, was at his desk again yesterday morning, much pleased with conditions up there. In a short time, said he, the new concen trator will begin operating with three shifts, and its output correspondingly increased. At present, owing to the lack of means with which to transport the ores, operations are con-fined to a single shift at the plant. Senator Kearns and President David Keith of the Silver King, by whom the K.-K. company was founded, left for camp again yesterday morning to hurry up the equipment

NEW QUICKSILVER DEPOSITS.

Thousands of Tons of This Ore Said to Be in Sight.

Special to The Tribune. CALIENTE, Nev., Aug. 30.-In company with J. C. Whalen, owner of a group of fifteen claims lying three miles north of the town of Caliente, a representative of

fifteen claims lying three miles north of the town of Caliente, a representative of The Tribûne made a trip to the claims yesterday to examine the wonderful deposit of quicksilver said to have been opened up recently in these properties. These claims, on which Mr. Whalen has done 500 feet of development work, lie between Antelope canyon and the Floche county road and resemble the surface indications of the Calico mountains in Arizona.

On the last claim to the southwest, nearest the town of Caliente, a forty-foot shaft has been sunt in a deposit of clanabar, averaging 10 to 15 per cent quick-silver in a ledge about 100 feet in width. The footwall towers above the ledge nearly 100 feet on the northwest side of the gulch, and surface discolorations show the course of the ledge plainly for more than 300 feet up the mountains.

On the northwesterly extension to this claim the ledge retains its width across a shallow canyon, and on the mountain side widens to nearly 200 feet. The cinnabar deposit crops up half-way across the claim from the footwall side and is stripped for this distance and opened up at intervals for deep, open cuts.

In the center of the cinnabar dedge Mr. Whalen has sunk an incline shaft on an eight-foot deposit of what he calls pink cinnabar, which carries almost pure quicksilver, the ore polibhing like burnished sliver but retaining a dark hue. On this is a deposit of crystalized cinnabar, the whole ledge going 30 to 60 per cent quicksilver.

Mr. Whalen has more than twenty tons

Mr. Whalen has more than twenty tons

Simple Way to Cure Dyspepsia.

Take a Mi-o-na Tablet After Each Meal," Says F. C. Schramm.

With Mi-o-na there is no bother of guessing at the dose or using so many poeneful or anything of that kind

spoeneful or anything of that kind. This valuable remedy for the cure of dyspepsia is in tablet form, and is the simplest way to cure the disease. "Just take one Mi-o-na tablet after each meal," says Druggist F. C. Schramm, "and in a few days you will find digestion improved, health returning, and good, solid flesh added." This remarkable remedy is not a mere digestive; it mingles with the food-and is readily assimilated by the system. It aids digestion and regulates and strengthens the whole digestive tract, so that after its use for a short time healthy and natural action is restored to the stomach and bowels.

PROBATE AND GUARDIANSHIP

Consult County Clerk or the respective eigners for surther information.

IN THE DISTRICT COURT, PRO-bate Division, in and for Salt Lake Coun-ty, State of U#h.—In the matter of the estate of Dougal Adamson, deceased.—

minerals. The cost of shipping the ore from Cisco station, on the Rio Grande Western, to Niagara, N. Y. is \$256 for the car, and the cost of treatment at the experimental plant was about 1969, leaving a net profit of \$4859 for the ore.

This information comes from John Welsh and James H. Lofftus, two of the owners of the property. Stephen A. Lockwood of Buffalo, N. Y., is the other owner and the one who is carrying on the experimental operations.

A small force of men is doing outside development work, and occasionally the shaft, from which comes the rich ore, is worked in, but to no extent.

During recent developments there has State of Dougal Adamson, deceased.—

Notice.

The petition of Peter Adamson, administrator of the estate of Dougal Adamson, deceased, praying for the settlement of final account of said administrator and for the distribution of the residue of said estate to the persons entitled, has been set for bearing on Friday, the 2nd day of September, A. D. 1994, at 16 o'clock s. m., at the county courthouse in the courtroom of said court, in Sait Lake City, Sait Lake county, Utah.

Witness the clerk of said court with the seal thereof affixed this 20th day of August, A. D. 1994.

(Seal.)

JOHN JAMES, Clerk.

By David B. Davies, Deputy Clerk.

S. W. Darke, Attorney for Estate.

IN THE DISTRICT COURT, PRo-late division, in and for Salt Lake coun-y, State of Utah.-In the matter of, the Estate of Thomas Cott Griggs, deceased.

of the ore from a shalt forty feet deep. On the surface and to a depth of twenty feet the ore is a decomposed, canary yellow, then it changes to a crystalized, leafy bronze-colored rock, and deeper down the crystals become brighter and larger and the rock an azure blue, indicating the presence of copper and the fluorine stain of other minerals. These crystals are what may be called antunite, similar to terbernite, in bright citron colors. It is an uranium-calcium phosphate, found in thin, small layers attached to the rock the rock being an azure blue and a sandstone formation, and is an uranium-copper phosphate. Scattered through this rock is a grayish, brownish and velvet black substance with a submetallicuster or dull black. This character of ore is said to carry the highest percentage of the radio-active minerals.

There are other properties in the same locality which, with development, would prove fully as valuable. The Radium Townsite and Mining company owns adjoining property, which it proposes to develop on a large scale the coming winter, in numerous places pitch blende has been found on its property, which by analysis shows radio-activity, but so far no pitch blende ores have been found on the Weish-Lofftus ground. Estate of Thomas Cott Griggs, deceased.

Notice

The petition of Thomas Hull and Robert A. Ure, administrators of the estate of Thomas Cott Griggs, deceased, praying for an order of sale of real property of said decedent, and that all persons interested appear before the said court to show cause why an order should not be granted to sell so much as shall be necessary, of the following described real estate of said deceased, to wit: All that certain tract of land situated in Sait Lake City, Sait Lake county, Ulah, described as follows, to wit:
